WORK EXPERIENCE

Adaptive Security 05/2026 – 10/2026

Software Engineer *New York City, NY*

AI Security & Governance Startup (Series B)

- Built a Windows device agent for AI governance and scaled deployment from **0 → 20** customers and **1,500+** endpoints, enabling AI application detection, app usage visibility, and fleet health monitoring
- Developed a Kafka pipeline ingesting device activity and detecting risk, using RDS for operations and ClickHouse for analytics
- Created an activity model for device, browser, and API integrations, powering a governance feed for user and agentic actions
- Led development of policy enforcement in the device agent and admin controls for AI application, account, and DLP policies, combining deterministic policy evaluation with an Amazon Bedrock-hosted LLM classifier to block sensitive data

Macro 07/2024 – 01/2026

Software Engineer *New York City, NY*

AI Productivity Suite Startup (Series A)

- Owned the metadata & properties platform across all workspace entity types, enabling extensibility and unified querying
- Led the design and implementation of a permissions-aware service for user and system properties, automated tagging, and relationship inference; aligned **3 product teams** on shared property semantics
- Built and rolled out an in-product task management system on the properties platform, replacing Linear company-wide and serving 3 external customers; scaled to **10K+ tasks** in the first month
- Owned the Markdown editor driving **50%+ of in-product activity**, delivering real-time collaboration and AI writing workflows while improving reliability through telemetry and performance tuning
- Built an AI chat with WebSocket streaming and prompts using conversation and document context to improve answer quality

Amazon 10/2022 – 10/2023

Software Engineer II *New York City, NY*

Amazon Business Inventory Replenishment Services

- Built and launched an Amazon Business inventory-replenishment work order system, automating scheduling and service provider assignment for 3 external customers
- Developed and operated an AWS pipeline for work order validation and downstream data delivery, reducing manual processing and providing near-real-time operational visibility

Bloomberg L.P. 01/2021 – 08/2022

Software Engineer *New York City, NY*

Fixed Income Trading Infrastructure

- Extended and maintained a fixed-income trading billing platform and C++ library supporting **$300M+ in annual revenue** across multiple trading workflows
- Built infrastructure for revenue forecasting and end-to-end trade testing, including a security classification API, backtesting framework, and clearinghouse simulator

EDUCATION

Virginia Tech 12/2020

Bachelor of Science in Computer Science *Blacksburg, VA*

Bachelor of Science in Mathematics (Applied Discrete Mathematics)

SKILLS

Languages: Rust • TypeScript • Python • Java • C++ • Swift • SQL

Frameworks & APIs: React • SolidJS • TanStack • REST APIs • GraphQL • WebSockets

Data & Infrastructure: AWS • Kafka • ClickHouse • Docker
